Proof SM

Pay the right person.

Verify payees before a large payout or distribution releases, and whenever bank details change. Payments under your threshold move as they do today.

A callback was built for a time when a voice was hard to fake.

The largest claim payments and distributions often go to people a carrier has never paid before, like a claimant's attorney or a contractor. Bank details arrive by email, and the check is a callback. A hijacked inbox can send the change from the right domain, and a cloned voice can answer the call.

~55%

of insurance payments still go out by check
ClaimsPages, Feb 2026

Verify the big payouts and leave everything else alone.

Set a dollar threshold

Payees above the amount you choose verify to NIST IAL2, with deepfake checks running, before funds release.

Lock the payment details

Transaction Signing ties approval to the exact amount and account, so changed details need a new one.

Keep the record

Each verified payout leaves a signed record of who approved it and where the money went.

Map your payment flow with our team.
